

Mathematical Modeling with MATLAB

Agenda

- MATLAB for Mathematical Modeling
- Mathematical Modeling Examples
 - Parametric modeling
 - Black box modeling
 - First principles modeling
- Summary

We use math to describe our world

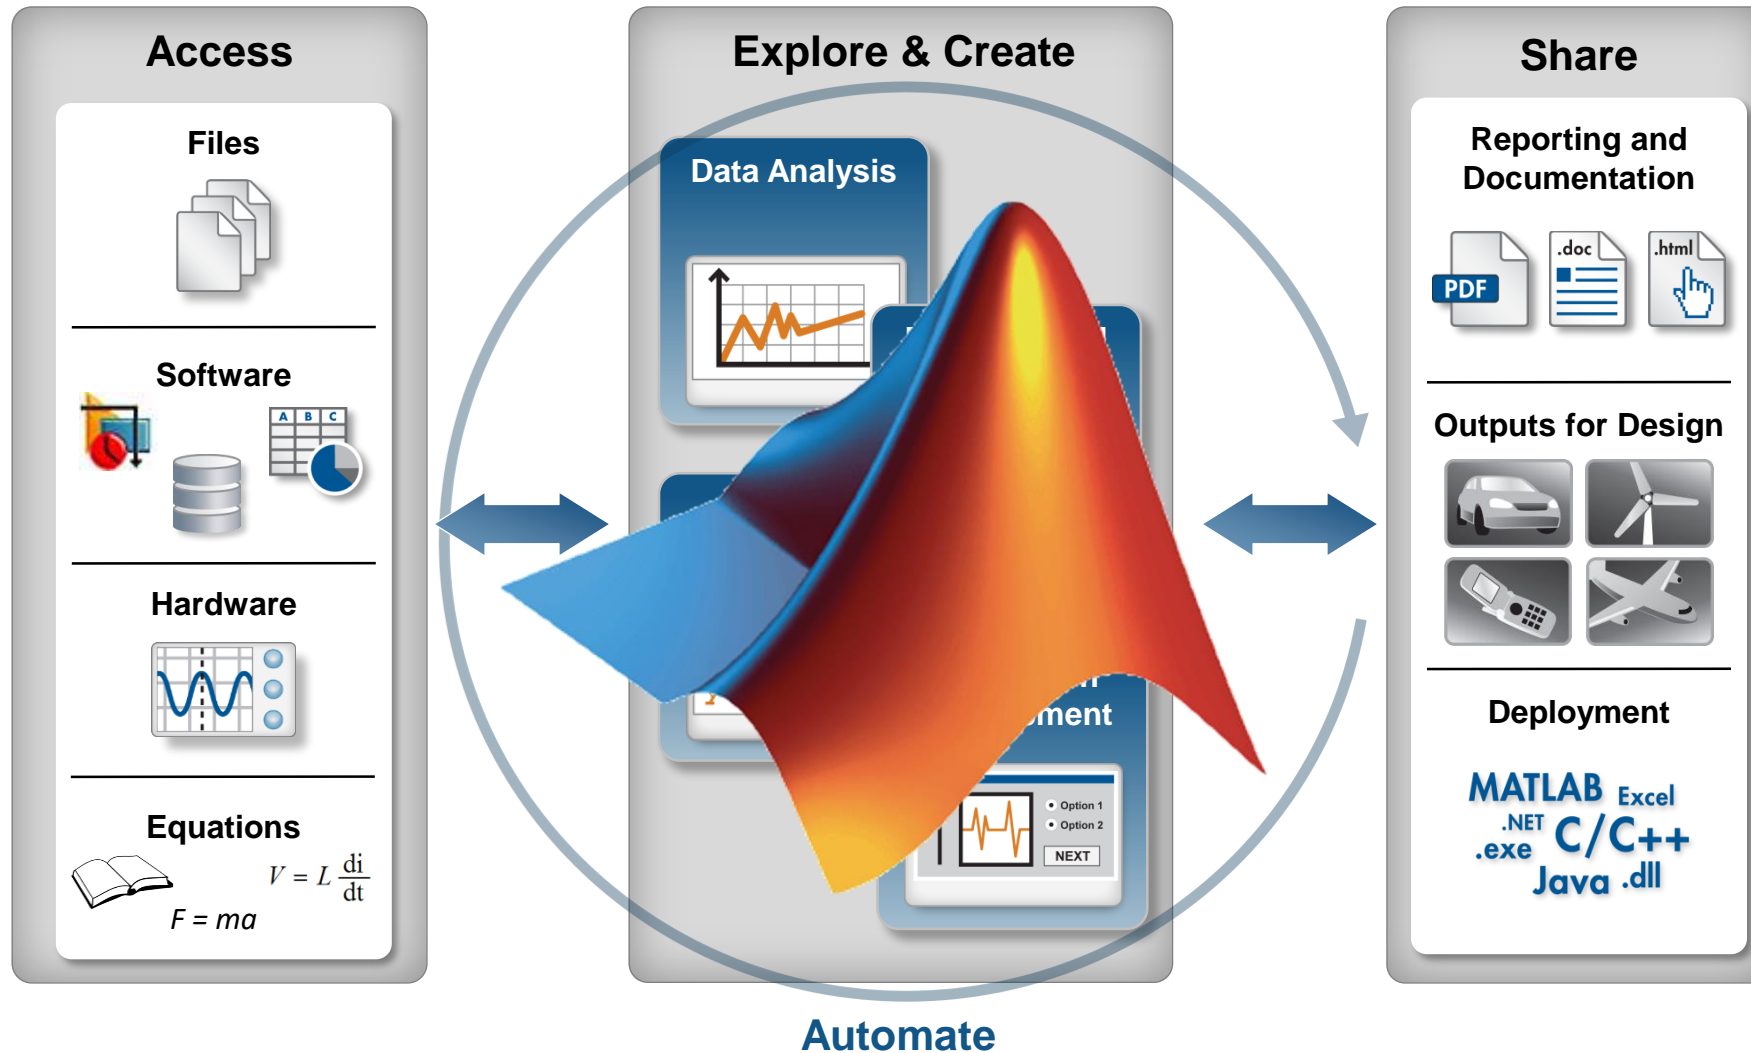

- Mathematical modeling is the use of a mathematical language to describe a system or process.

Lift on aircraft wing

- Uses of Mathematical Modeling
 - Forecast system behavior**
Predict and gain insight into system behavior for various “what-if” scenarios
 - Optimize system behavior**
Identify parameters that optimize system performance
 - Design control systems**
Develop model to represent plant during control system design

Technical Computing Workflow

Agenda

- MATLAB for Mathematical Modeling
- Mathematical Modeling Examples
 - Parametric modeling
 - Black box modeling
 - First principles modeling
- Summary

Focusing on Three Types of Modeling

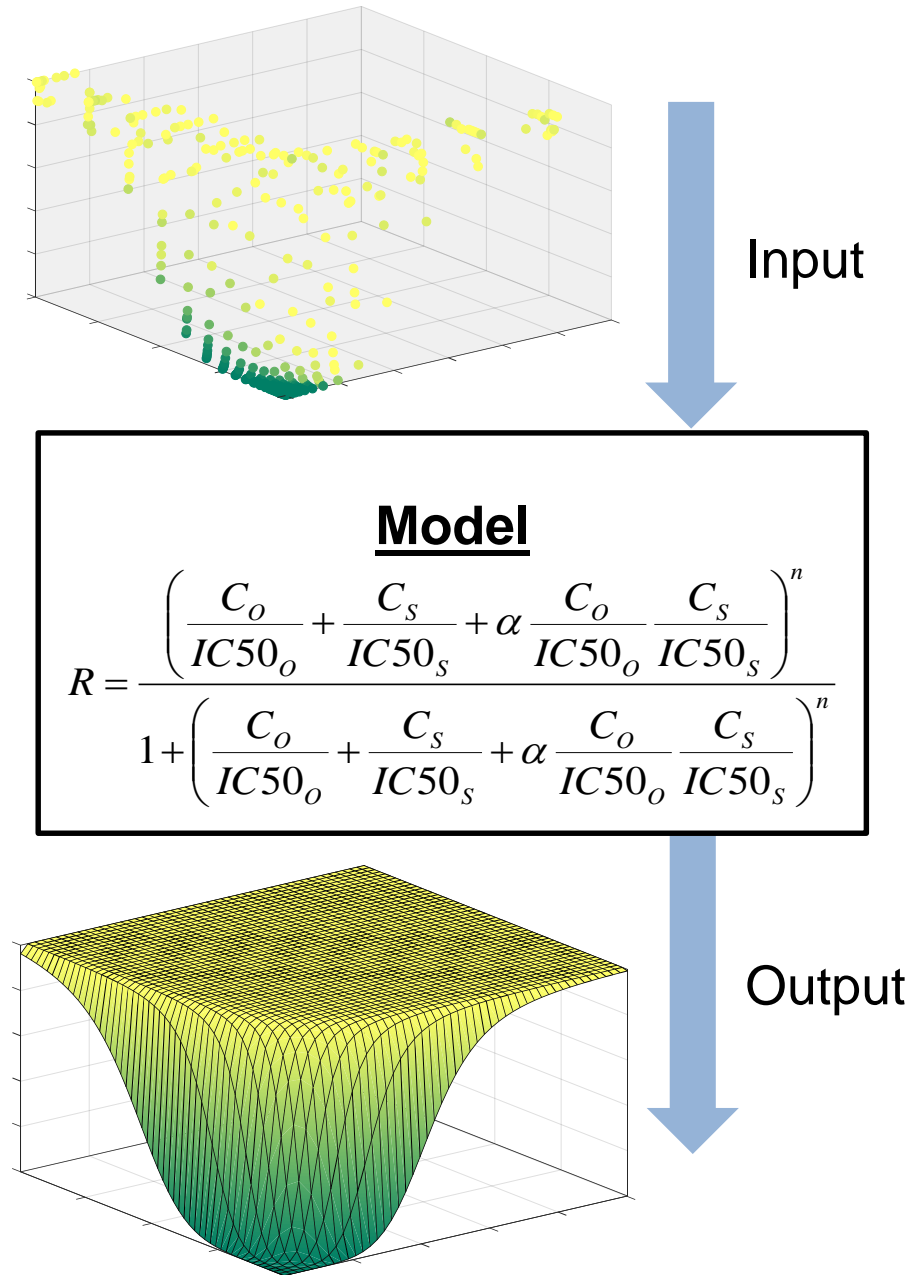

- Parametric Modeling
 - Uses a known model that maps the independent variables to the dependent variable with a set of constant unknowns
- Black-box Modeling
 - Uses an automatically created model that “learns” to map the independent variables to the dependent variable
- First Principles Modeling
 - Uses a model derived directly from the laws of physics without making assumptions such as empirical or fitted parameters

Agenda

- MATLAB for Mathematical Modeling
- Mathematical Modeling Examples
 - Parametric modeling
 - Black box modeling
 - First principles modeling
- Summary

Parametric Modeling

- Used when a relationship between predictors and response is known
- Build the model by estimating constant unknown parameters
- Common methods
 - Linear regression (`fitlm`)
 - Curve and surface fitting (`fit`)

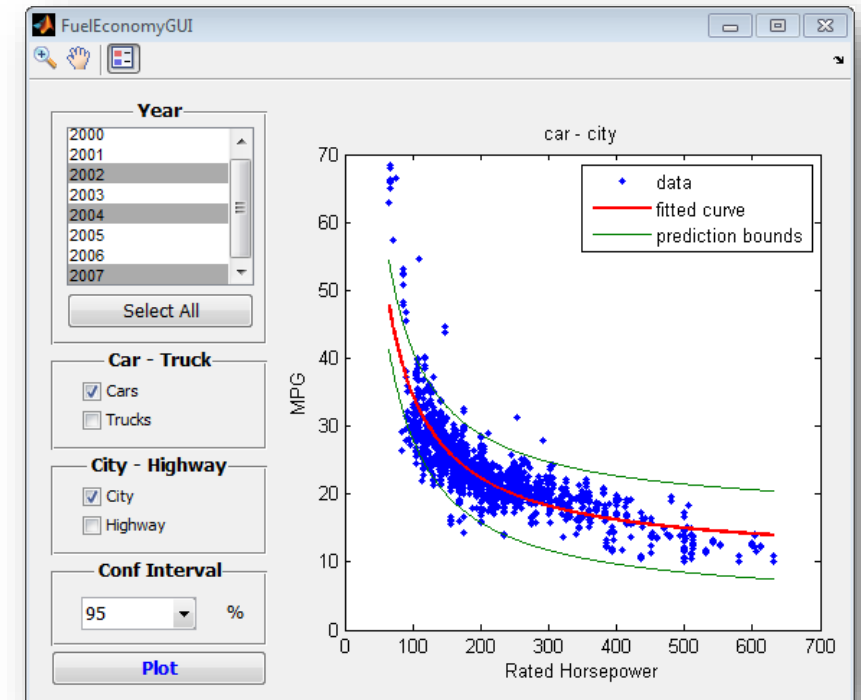

Demo: Fuel Economy Analysis

Parametric modeling in MATLAB

Products Used

- MATLAB
- Statistics and Machine Learning Toolbox
- Parallel Computing Toolbox

- **Objective:**
 - Study the relationships between fuel economy, horsepower, and type of vehicle
- **Inputs**
 - Historical fuel economy data for cars manufactured between 2000 and 2012 from Excel
- **Approach:**
 - Interactively visualize and explore trends
 - Fit a curve to the data
 - Document results

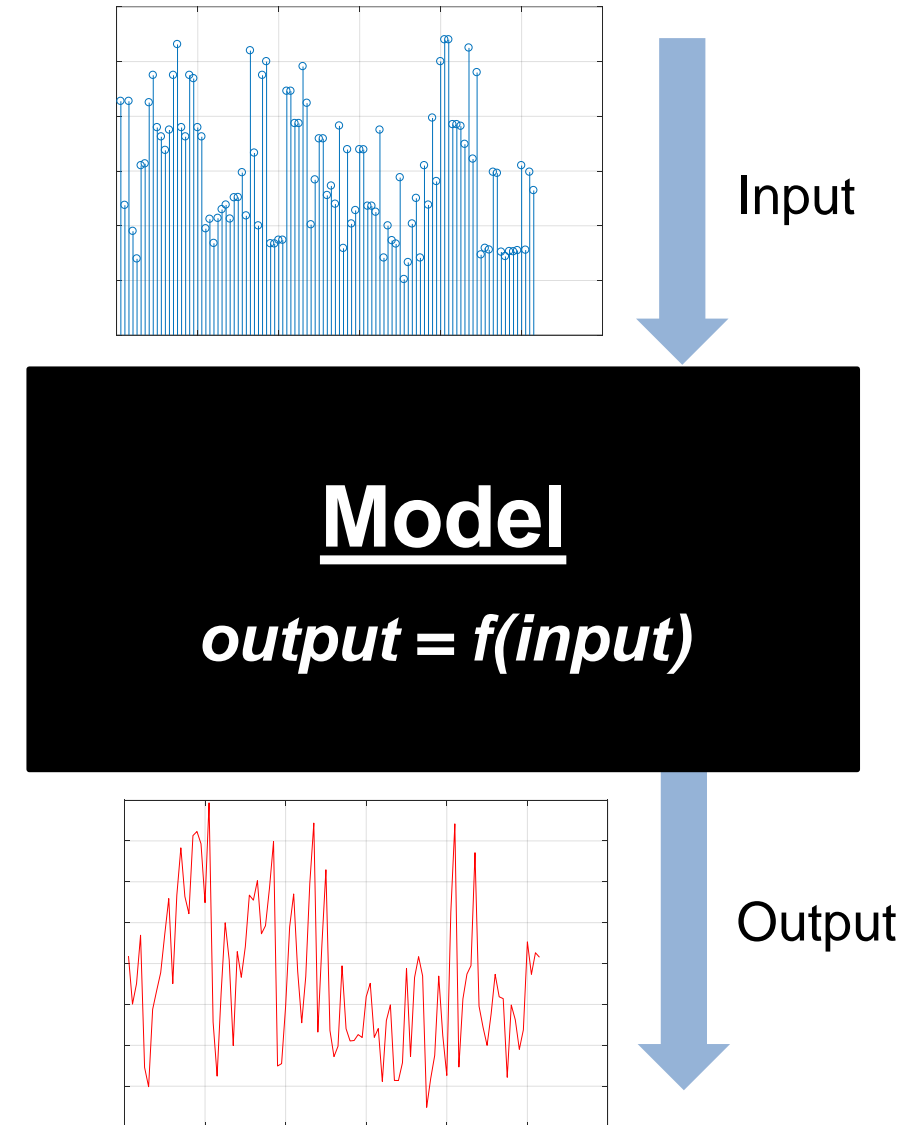

$$MPG = b_1 + b_2/RatedHP$$

Agenda

- MATLAB for Mathematical Modeling
- Mathematical Modeling Examples
 - Parametric modeling
 - Black box modeling
 - First principles modeling
- Summary

Black-Box Modeling

- Used when relationship between predictors and response is unknown
- Primary interest is in fitting the data rather than the structure of the model
- Model structures
 - Neural networks (`network`)
 - Support vector machines (`fitrsvm`)
 - Gaussian processes (`fitrgp`)
 - Decision trees (`fitrtree`)

Demo: Fuel Economy Analysis

Black-box modeling in MATLAB

Products Used

- MATLAB
- Statistics and Machine Learning Toolbox
- Parallel Computing Toolbox

- **Objective:**
 - Study the relationships between fuel economy, horsepower, and type of vehicle
- **Inputs**
 - Historical fuel economy data for cars manufactured between 2000 and 2012 from Excel
- **Approach:**
 - Interactively visualize and explore trends
 - Train a regression model
 - Document results

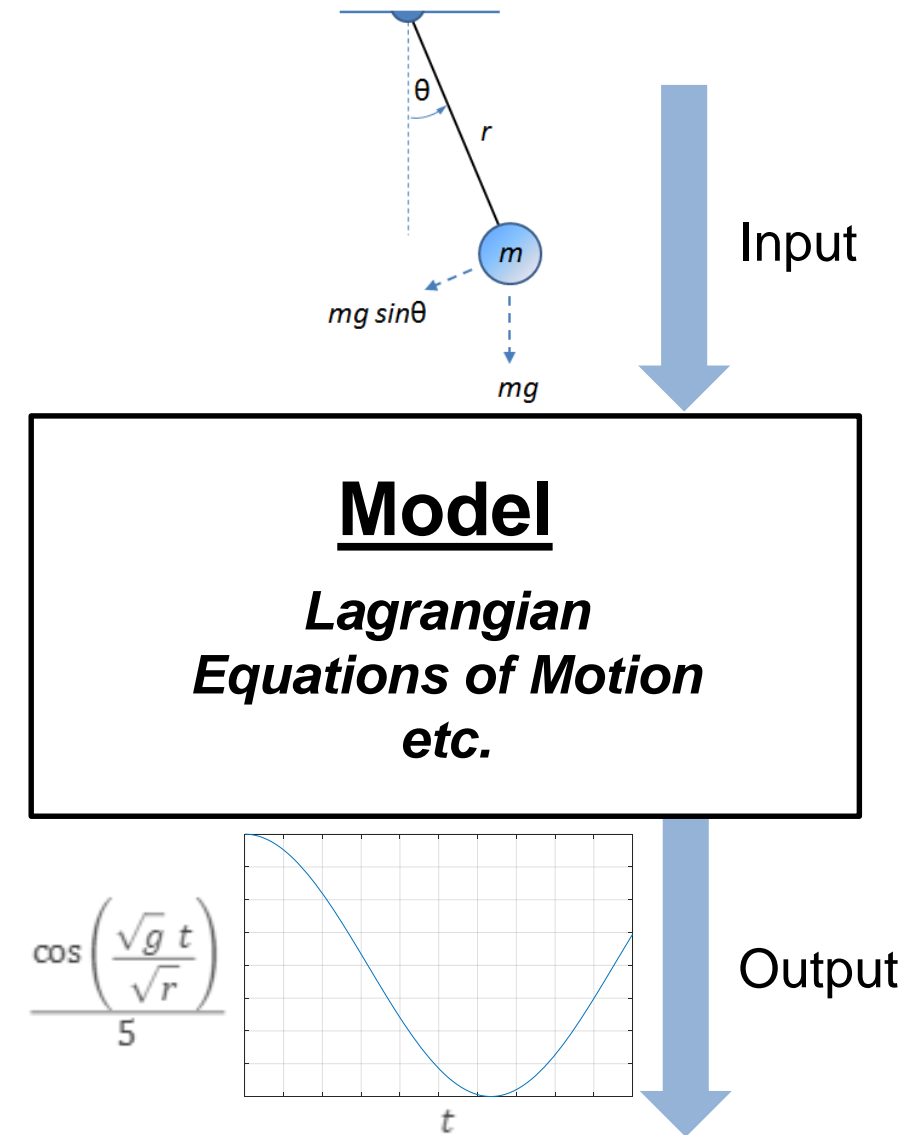

Agenda

- MATLAB for Mathematical Modeling
- Mathematical Modeling Examples
 - Parametric modeling
 - Black box modeling
 - First principles modeling
- Summary

First Principles Modeling

- Used when relationship between predictors and response can be defined with analytical equations
- Build the model directly from first principles
- Solve differential equations
 - Symbolic solution (`dsolve`)
 - Numerical integration (`ode45`, `ode23s`)
 - Constrained minimization (`fmincon`)

Demo: Optimizing Gantry Crane Motion

First principles modeling in MATLAB

- **Objective:** Determine acceleration profile that minimizes payload swing
- **Inputs:**
 - Free body diagram and first principles
- **Approach:**
 - Derive equations of motion
 - Determine ideal acceleration profile
 - ODE solver
 - Constrained minimization
 - Find all possible solutions

Products Used

- MATLAB
- Symbolic Math Toolbox
- Optimization Toolbox
- Parallel Computing Toolbox

Agenda

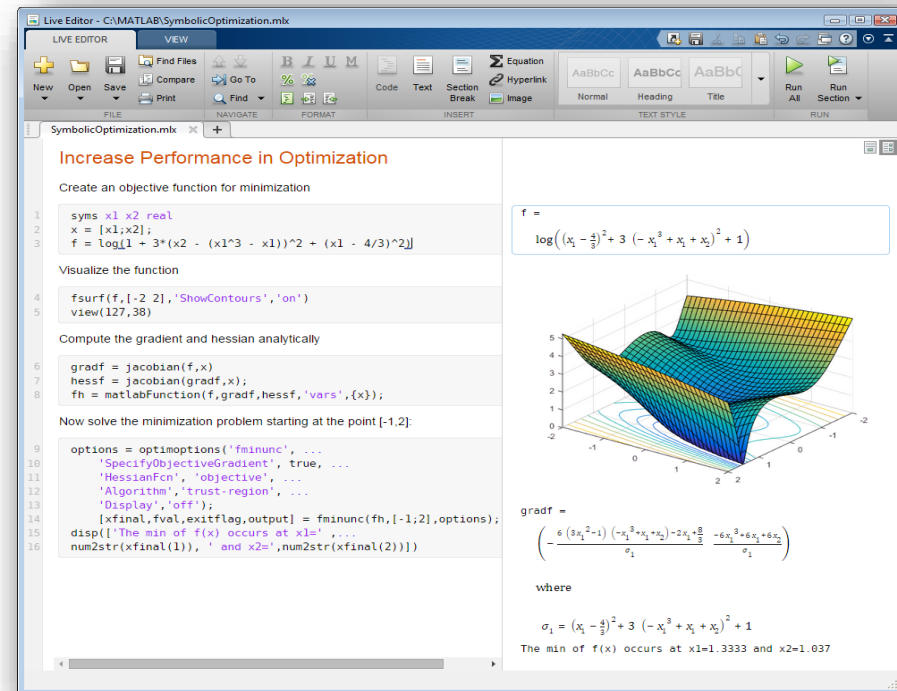

- MATLAB for Mathematical Modeling
- Mathematical Modeling Examples
 - Parametric modeling
 - Black box modeling
 - First principles modeling
- Summary

Why MATLAB for Mathematical Modeling

- Explore and integrate different modeling approaches in different domains
 - Numeric: approximate solution in vector form
 - Symbolic: exact solution in form of analytical expression

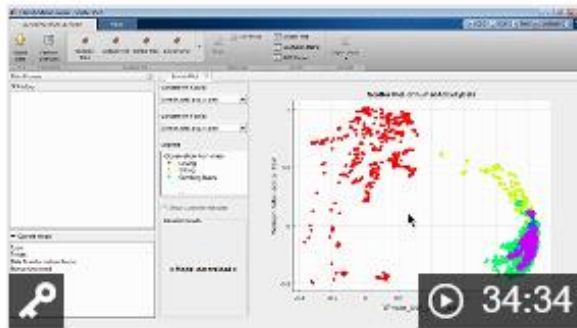

Mathematical Models for...

- Engineering
- Controls
- Science
- Finance
- Optimization
